

TWU LOCAL 100 — MABSTOA

HEAT ALERT

IN HIGH TEMPERATURE SITUATIONS, MANAGEMENT MUST PROVIDE ACCESS TO WATER.

- If there isn't water in the depot, check with the yard dispatcher
- If on the road, check with the relief point dispatcher and other dispatchers along the route. At the very least, relief point dispatchers are supposed to have a cooler with water for the operators.
- In maintenance locations, the ice and water are supposed to be in clear sight on the floor.
- For traffic checkers who report to a road location, field supervisors should deliver water to you. Anyone who doesn't get it, needs to contact field supervision. The same goes for members reporting to 2 Broadway. Contact field supervision if it is not available.
- In all situations, if water is not available - and supervision does not correct the situation - notify your union representative
- Log any management failures to provide water into your depot chief's line steward log book.
