A **"Serious Health Condition"** means an illness, injury impairment, or physical or medical condition that involves one of the following:

1. Hospital Care

Inpatient care (i.e., an overnight stay) in a hospital, hospice or residential medical care facility, including any period of incapacity¹ or subsequent treatment in connection with or consequent to such inpatient care.

2. Absence Plus Treatment

- (a) A period of incapacity¹ of more than three consecutive calendar days (including any subsequent treatment or period of incapacity¹ relating to the same condition), that also involves:
 - (1) Treatment² two or more times by a health care provider, by a nurse or physician's assistant under direct supervision of a health care provider, or by a provider of health care services (e.g., physical therapist) under orders of, or on referral by, a health care provider; or
 - (2) Treatment by a health care provider on at least one occasion which results in a regimen of continuing treatment³ under the supervision of the health care provider.

3. Pregnancy

Any period of incapacity due to pregnancy, or for prenatal care.

4. Chronic Conditions Requiring Treatments

A chronic condition which:

- (1) Requires periodic visits for treatment by a health care provider, or by a nurse or physician's assistant under direct supervision of a health care provider;
- (2) Continues over an extended period of time (including recurring episodes of a single underlying condition); and
- (3) May cause episodic rather than a continuing period of incapacity¹ (e.g., asthma, diabetes, epilepsy, etc.).

³ A regimen of continuing treatment includes, for example, a course of prescription medication (e.g., an antibiotic) or therapy requiring special equipment to resolve or alleviate the health condition. A regimen of treatment does not include the taking of over-the-counter medications such as aspirin, antihistamines, or salves; or bed-rest, drinking fluids, exercise, and other similar activities that can be initiated without a visit to a health care provider.

¹ "Incapacity", for purposes of FMLA, is defined to mean inability to work, attend school or perform other regular daily activities due to the serious health condition, treatment therefor, or recovery therefrom.

² Treatment includes examinations to determine if a serious health condition exists and evaluations of the condition. Treatment does not include routine physical examinations, eye examinations or dental examinations.

5. Permanent/Long-term Conditions Requiring Supervision

A period of incapacity¹ which is permanent or long-term due to a condition for which treatment may not be effective. The employee or family member must be under the continuing supervision of, but need not be receiving active treatment by, a health care provider. Examples include Alzheimer's, a severe stroke, or the terminal stages of a disease.

6. Multiple Treatments (Non-Chronic Conditions)

Any period of absence to receive multiple treatments (including any period of recovery therefrom) by a health care provider or by a provider of health care services under orders of, or on referral by, a health care provider, either for restorative surgery after an accident or other injury, or for a condition that would likely result in a period of incapacity¹ of more than three consecutive calendar days in the absence of medical intervention or treatment, such as cancer (chemotherapy, radiation, etc.) severe arthritis (physical therapy), kidney disease (dialysis).

<u>NOTE</u>: Ordinarily, unless complications arise, the common cold, the flu, ear aches, upset stomach, minor ulcers, headaches other than migraines, routine dental or orthodontia problems, periodontal disease, etc., are examples of conditions that **<u>DO NOT</u>** meet the definition of a serious health condition and **<u>DO NOT</u>** qualify for FMLA leave.
